

Mack Bros Data Sheet

Straightline 40

Mack Bros Straightline 40 Roofing and Cladding is a stylish, versatile and easy-to-install cladding system. This economical system is available in custom-sized trays, with attractive ribs which provide sleek lines and an elegant European look. The trays are snapped together using hidden clips, with no special tools required.

Applications:

Widely used on new homes, existing buildings and commercial projects. Stylish application for roofs, facades, turrets, domes, fascias and soffits. Use to create features such as chimney cladding, gable and infill, entrance canopies and interior feature walls.

Features and benefits:

- Fast installation as no need for seam closing.
- Similar in appearance to standing seam with a wide tray and raised seam.
- Adapts to lower pitched roofs with a 40mm seam height accepting pitch down to 1.5 degrees.
- Straightline 40 panel fixing details allow for more expansion and contraction, ideal for very long panels. Suitable for min pitch of 1.5° to 45°, and wall cladding.
- Suitable for projects which need to comply with height restrictions and low roof designs.
- Easily handled because of flexibility with complex designs and shapes.
- Economical due to minimal wastage of materials, reduced structural requirements and installation times.

Materials:

Pure Zinc (numerous varieties in colours and pre-treatments)
Aluminium (endless colours and various textures)
Galvanised Steel
Stainless Steel
Colorbond
Copper
Corten
